

Cocohub is your new favorite teaching assistant

and it's here to upgrade your students, and give them leverage to get to the next level.

You already got the best teaching methods and materials, but didn't you wonder

- How can I dedicate more time for every student?
- How can I create a personalized learning experience?
- How can I create more gamified, engaging ways to communicate with my students and assess their performance?

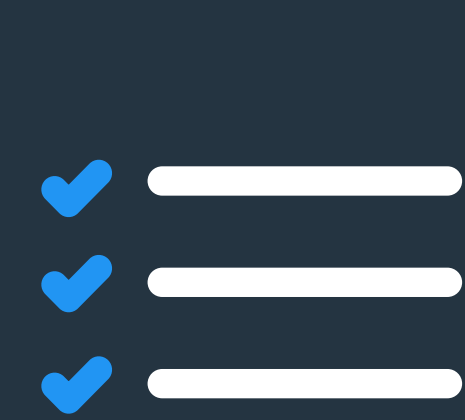

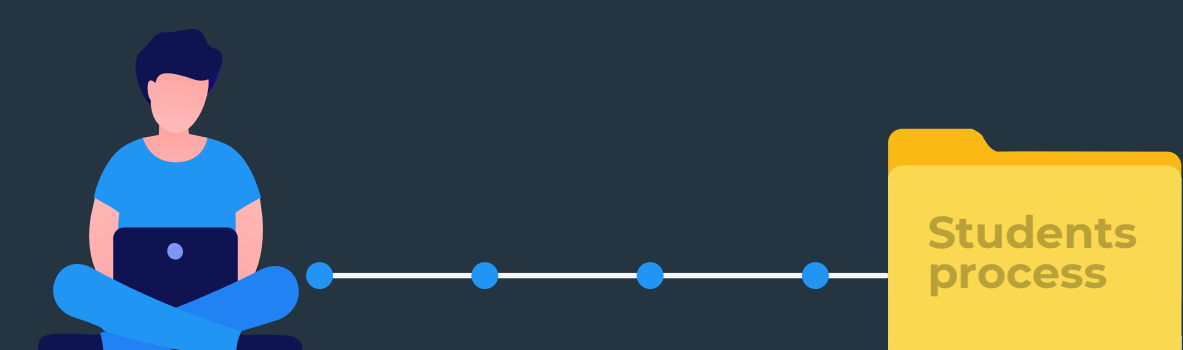

We have the solution.

Cocohub is a no-code platform where every educator and teacher can create a learning assistant or bot - on text, voice, and even video - according to your and your students' needs, easily, quickly and without any coding knowledge.

Personalized learning, rehearsing, and assessment

Build educational skills and conversational flows to track each and every student's progress, grade their work - and integrate it with your databases.

Gamification

Turn every rehearsing and assessment into a gamified, pleasant and engaging experience.

Mobile Learning

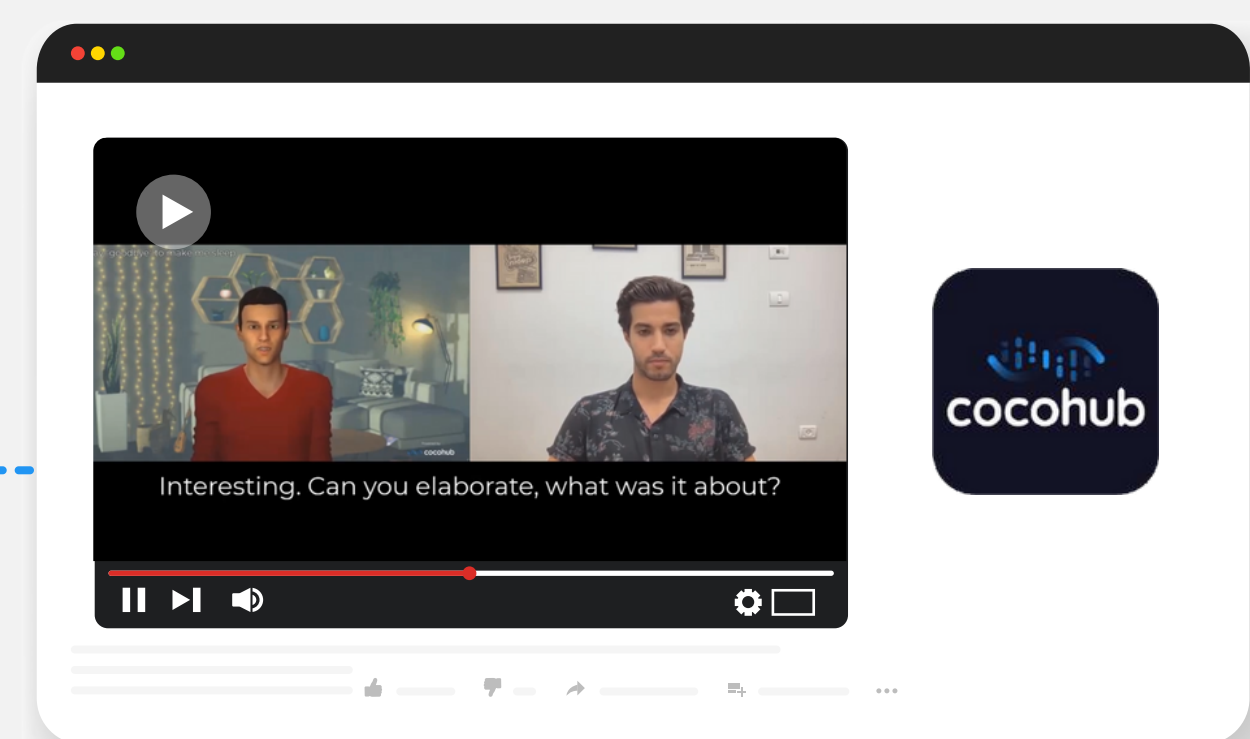

Meet the students where they are, whenever they want - on video platforms, over the phone, and throughout various messaging apps.

Administrative Tasks

Let our bot collect the information for you - use your precious time only for actually educating.
